

EPICOS, a unique collaborative approach to engage and deliver aerospace innovation solutions locally and abroad

Supporting continued collaboration of the Aerospace Network, **WaVv** has partnered with **Aerospace Ventures** to launch the **EPICOS platform** in Canada. The platform by design integrates with existing aerospace systems and databases around the world rapidly identifying market suppliers by capability and geography.

The EPICOS platform is a leading global B2B information platform for the Aerospace, Defence and High Technology Industries and is the only digital industrial collaboration and service provider around the world. EPICOS is a reliable source and database of business intelligence actively used by professionals.

EPICOS (epicos.com) provides:

- an immediate link to global business opportunities,
- recognition of the capabilities of the Canadian Aerospace sector,
- alignment with existing information systems regarding offsets and,
- a collaborative pathway for non-traditional aerospace suppliers and emerging technology companies of all sizes to deliver their products and services into this market sector.

The benefit of EPICOS is the speed to access a database of businesses across Canada that traditionally serve this market sector and identify emerging SME's. The EPICOS community accesses innovation requirements from adjacent market sectors and delivers into new supply chains. Collaborating with existing databases provides an integrated Canadian sector view for export or to attract opportunities into Canada.

The Aerospace sector supports many industries in Canada and receives products and services from all industrial sectors of the country. Initiatives outlined in both the Canadian Innovation Agenda and the Canadian Defence Strategy continue to support our status as a Nation of innovators ensuring we remain Strong, Secure, Engaged.

“The ability to support Canadian innovation in science, information communications and technology, autonomous systems, agriculture, drones, health, artificial intelligence and many more industry sectors through this platform is long overdue”, **states Brad Robson, President of WaVv**. “Engaging in a global market place, delivering innovation, creating jobs and sustaining important research and development enhances the Canadian export of much needed solutions. Partnering with Aerospace Ventures accelerates that plan.”

“We are more than pleased to promote the Canadian Aerospace sector providing, through a wide range of customized services, a pathway to detect business opportunities and expand their global market share”, **states Yannis Ailianos, Managing Director of AV**. “The EPICOS portal offers an invaluable database of the global Aerospace, Defence and High Technology (ADHT) Industries and their capabilities, while it is recognized as a credible source of information on developments in the relevant markets by the majority of ADHT Industries”.

ABOUT WaVv

Located in Calgary, WaVv supports clients globally to accelerate innovation through to commercialization. We pursue, engage and deliver business opportunities between the Aerospace, Defence, Security, Energy and Mining industries. Working through the Canadian IDEaS, BCIP and ISC programs provides an immediate response in delivering innovative solutions.

WaVv is also produces and hosts ConverGX®, the only annual global conference dedicated to finding common solutions to common problems between these sectors. The 4th annual conference will be held February 5-7, 2019 in Calgary, Alberta, Canada.
